Post-doctoral position in Experimental Molecular Physics at JILA and the University of Colorado-Boulder in the group of Heather Lewandowski.

Applications are being accepted for a post-doctoral position to work on a project to study chemical reactions of sympathetically cooled and trapped molecular ions with cold neutral radicals. The successful candidate will have a PhD in physical chemistry, molecular physics, or related field. Previous experience and expertise with laser spectroscopy, molecular beams, and chemical dynamics are desired, but not required.

Candidates should send a detailed CV, statement of research interests, and contact information for three references to heather.lewandowski@colorado.edu.
